SKILLS

- Python
- spaCy
- Hugging Face Transformers
- PyTorch
- scikit-learn
- NLTK
- FastAPI
- SQL
- Git

LANGUAGES

- ItalianNative
- EnglishFluent
- SpanishConversational

CERTIFICATIONS

Hugging Face NLP Course Certificate

Alessandro Ricci

Junior NLP Engineer

PROFILE

Junior NLP Engineer with hands-on experience building text classification, information extraction, and retrieval solutions using Python and modern NLP frameworks. Comfortable working across data preparation, model evaluation, and API integration, with a strong focus on reproducible experiments and measurable improvements.

EXPERIENCE

Junior NLP Engineer · LinguoTech S.r.l. Feb 2024 - Present

- Built Python-based text classification pipelines for customer support tickets, improving routing accuracy by 18% on a held-out validation set.
- Fine-tuned transformer models with Hugging Face and PyTorch for intent detection and entity extraction across 6 Italian-language domains.
- Developed FastAPI endpoints to serve inference results, reducing average response time from 1.8s to 620ms.
- Automated experiment tracking and dataset versioning, cutting manual QA effort by 30%.

NLP Intern · DataMinds Italia Jun 2023 - Jan 2024

- Preprocessed and labeled 25k+ documents for topic classification and named entity recognition using Python and spaCy.
- Evaluated multiple baseline models in scikit-learn, increasing F1 score from 0.71 to 0.83 for the final prototype.
- Created reusable scripts for tokenization, cleaning, and train/validation splits, reducing preprocessing time by 40%.
- Supported weekly model reviews by preparing clear performance reports and error analyses.

Data Science Trainee · Alfa Analytics Jan 2023 - May 2023

- Assisted with feature engineering and text normalization for a multilingual sentiment analysis proof of concept.
- Worked with SQL to extract and join 100k+ rows of annotated feedback data from internal databases.
- Documented model assumptions and evaluation results, enabling faster handoff to the engineering team.
- Contributed Python notebooks that standardized dataset inspection and baseline benchmarking.

Research Assistant · Università degli Studi di Milano Sep 2021 - Dec 2022

- Supported an academic project on Italian text mining, cleaning and structuring corpora with Python scripts.
- Compared classical NLP approaches and transformer baselines for document categorization, identifying a 12% lift in macro-F1.
- Prepared datasets and reproducible notebooks used in internal presentations and student workshops.
- Collaborated with supervisors to publish technical notes on error patterns and annotation consistency.

EDUCATION

MSc in Computer Science, Data Science track

Università degli Studi di Milano · 2023

BSc in Computer Engineering

Politecnico di Milano · 2021
