

Anna Lindström

Lead Computer Vision Engineer

PROFILE

Lead Computer Vision Engineer with 10+ years of experience building production-grade perception systems for robotics, industrial inspection, and edge AI. Strong track record of translating research into reliable products, leading cross-functional teams, and improving model accuracy, latency, and deployment efficiency at scale.

EXPERIENCE

Lead Computer Vision Engineer · Nordic Vision Systems AB Mar 2021 - Present

- Lead a team of 6 engineers delivering computer vision pipelines for industrial quality inspection across 14 production lines.
- Reduced false reject rates by 28% by redesigning defect detection models in Python using PyTorch and OpenCV.
- Built an edge deployment stack with TensorRT that cut inference latency from 120 ms to 38 ms on embedded GPU hardware.
- Established data labeling, evaluation, and monitoring workflows that improved model release velocity by 40%.

Senior Computer Vision Engineer · Autonomiq Robotics Aug 2018 - Feb 2021

- Developed perception modules for mobile robots, combining stereo depth, object detection, and tracking to achieve 96% navigation success in pilot deployments.
- Optimized training and inference pipelines, reducing GPU training time by 35% and enabling weekly model iterations.
- Partnered with hardware and systems teams to integrate camera calibration and sensor fusion into production robots deployed at 20+ customer sites.

Computer Vision Engineer · HexaTech Imaging Jun 2015 - Jul 2018

- Implemented image segmentation and defect classification systems for manufacturing clients, increasing automated inspection coverage from 55% to 87%.
- Created reusable Python tooling for dataset preparation, experiment tracking, and evaluation, lowering manual analysis time by 60%.
- Collaborated with product managers and field engineers to validate prototypes and convert them into customer-facing solutions.

Machine Learning Engineer · Scandia Analytics Sep 2012 - May 2015

- Built early machine learning prototypes for video analytics and anomaly detection, improving event detection precision by 22%.
- Supported deployment and testing of computer vision services in Linux-based environments, including scripting in Python for data ingestion and model validation.
- Contributed to cross-functional proof-of-concept work that informed two commercial product launches.

EDUCATION

MSc in Computer Science, Specialization in Machine Learning

KTH Royal Institute of Technology · 2012

BSc in Engineering Physics

Lund University · 2010
