SKILLS

- Python
- Kubernetes
- AWS
- Terraform
- GitHub Actions
- CI/CD
- Docker
- Linux
- Observability (Prometheus/Grafana)
- Infrastructure as Code

LANGUAGES

English	Native
French	Conversational
German	B2

CERTIFICATIONS

AWS Certified DevOps Engineer – Professional

CKA: Certified Kubernetes Administrator

Oliver James Harrington

Principal DevOps Engineer

PROFILE

Principal DevOps Engineer with 12+ years of experience designing resilient cloud platforms, automating delivery pipelines, and improving operational maturity across regulated environments. Known for leading cross-functional teams, reducing release friction, and driving measurable gains in reliability, security, and engineering productivity.

EXPERIENCE

Principal DevOps Engineer · Northbridge Digital Mar 2021 - Present

- Led a platform modernisation programme across 18 product teams, reducing deployment lead time from 2 days to under 30 minutes.
- Built Python automation services for environment provisioning and operational tasks, cutting manual support tickets by 41%.
- Implemented Terraform-based infrastructure standards and reusable modules, improving consistency across 120+ cloud resources and lowering configuration drift.
- Introduced SLOs and observability dashboards that reduced MTTR by 34% and improved on-call response times.

Senior DevOps Engineer · Alder & Finch Financial Services Jun 2017 - Feb 2021

- Designed and maintained AWS landing zones and secure CI/CD pipelines for regulated workloads, supporting PCI and ISO-aligned delivery practices.
- Migrated 60+ services to Kubernetes, increasing release frequency from monthly to weekly while improving service uptime to 99.95%.
- Used Python and Bash to automate release validation and compliance checks, saving an estimated 20 hours per week for engineering teams.
- Partnered with security and platform teams to implement secrets management and policy-as-code controls, reducing audit findings by 50%.

DevOps Engineer · MerseyTech Solutions Sep 2013 - May 2017

- Established the first automated build and deployment pipelines for a portfolio of internal applications, reducing deployment failures by 63%.
- Provisioned environments using Infrastructure as Code and standardised Linux server builds, shortening new environment setup from 3 days to 2 hours.
- Created Python scripts for log analysis and deployment reporting, improving incident investigation speed and visibility for stakeholders.

Systems Engineer · Horizon Retail Group Jul 2010 - Aug 2013

- Supported Windows and Linux server estates across 40+ retail sites, maintaining availability for business-critical services.
- Helped implement early monitoring and patching automation, reducing recurring incidents by 27% over 12 months.
- Collaborated with developers to improve release procedures and basic scripting automation, laying the foundation for later DevOps adoption.

EDUCATION

MSc Computer Science
University of Manchester · 2010

BSc (Hons) Information Technology
University of Leeds · 2008
