SKILLS

- Python
- Apache Spark
- SQL
- Kafka
- AWS (S3, EMR, Redshift, Glue, Lambda)
- Docker
- Kubernetes
- Data Modeling
- ETL/ELT Frameworks
- Data Lakes/Warehouses
- Airflow

LANGUAGES

- FrenchNative
- EnglishFluent
- SpanishConversational

CERTIFICATIONS

- AWS Certified Solutions Architect - Professional
- Databricks Certified Associate Developer for Apache Spark

Antoine Dubois

Principal Data Engineer

PROFILE

Highly accomplished Principal Data Engineer with over a decade of experience designing, building, and optimizing scalable data platforms and pipelines. Proven expertise in big data technologies, cloud architecture, and driving data-driven initiatives to deliver robust analytics and business intelligence solutions. Adept at leading cross-functional teams and implementing best practices in data governance and security.

EXPERIENCE

Principal Data Engineer · DataSynth AnalyticsJan 2021 - Present

- Led the design and implementation of a new real-time data streaming platform using Kafka and Spark, processing over 10TB of data daily and reducing data latency by 70%.
- Orchestrated the migration of on-premise data warehouses to AWS Redshift, resulting in a 30% cost reduction and a 5x improvement in query performance.
- Developed and maintained critical data pipelines in Python and Scala, improving data reliability to 99.9% and supporting advanced analytics initiatives.
- Mentored a team of 5 data engineers, fostering best practices in coding, data governance, and scalable architecture.

Senior Data Engineer · StreamFlow SolutionsMar 2017 - Dec 2020

- Designed and built scalable ETL processes for marketing and sales data, integrating over 15 disparate data sources into a central data lake.
- Optimized existing SQL queries and data processing jobs, decreasing average execution time by 45% and freeing up computational resources.
- Implemented automated data quality checks and monitoring alerts, proactively identifying and resolving data integrity issues.
- Contributed to the development of a company-wide data dictionary and governance framework.

Data Engineer · InsightCorp TechnologiesSep 2013 - Feb 2017

- Developed and maintained data pipelines using Python scripts for data ingestion, transformation, and loading into PostgreSQL databases.
- Collaborated with data scientists to prepare and clean large datasets for machine learning model training, accelerating model deployment cycles by 20%.
- Managed database schema changes and performance tuning for OLAP applications.
- Automated daily reporting tasks, reducing manual effort by 8 hours per week.

EDUCATION

M.Sc. in Data Science and Engineering

Sorbonne Université · 2013

B.Sc. in Computer Science

CentraleSupélec · 2011
