SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform

CI/CD: Jenkins, GitLab CI, ArgoCD, Spinnaker

Containerization: Docker, Kubernetes, Helm

Scripting/Automation: Python, Bash, PowerShell

Infrastructure as Code: Terraform, Ansible, CloudFormation

Monitoring & Logging: Prometheus, Grafana, ELK Stack, Datadog

Version Control: Git, GitHub, GitLab

Operating Systems: Linux (Ubuntu, RHEL), Windows Server

Networking: VPC, Load Balancers, DNS, VPN

LANGUAGES

English Native
French Conversational

CERTIFICATIONS

AWS Certified DevOps Engineer - Professional
Certified Kubernetes Administrator (CKA)

Eleanor Vance

Principal DevOps Engineer

PROFILE

Highly accomplished Principal DevOps Engineer with over a decade of experience in designing, implementing, and maintaining robust CI/CD pipelines and cloud infrastructure. Proven expertise in driving automation, enhancing system reliability, and leading cross-functional teams to deliver scalable and resilient solutions.

EXPERIENCE

Principal DevOps Engineer · Aurora Tech Solutions Jan 2021 - Present

- Led a team of 5 DevOps engineers to design and implement a new Kubernetes-based platform on AWS, reducing infrastructure costs by 25% and improving deployment frequency by 40%.
- Developed comprehensive CI/CD pipelines using GitLab CI and ArgoCD, automating software releases and decreasing deployment time from hours to minutes for 15+ microservices.
- Implemented robust monitoring and alerting solutions with Prometheus and Grafana, resulting in a 30% reduction in critical incident response times.
- Mentored junior engineers and established best practices for Infrastructure as Code (Terraform) and Python scripting, enhancing team efficiency and code quality.

Senior DevOps Engineer · Nexus Innovations May 2017 - Dec 2020

- Designed and managed scalable cloud infrastructure on Azure, supporting a critical e-commerce platform with over 1 million daily active users.
- Automated environment provisioning and configuration management using Ansible, reducing setup time for new environments by 60%.
- Implemented a centralized logging solution (ELK Stack) and established monitoring dashboards, improving system visibility and proactive issue detection.
- Scripted various automation tasks in Python and Bash, streamlining operational workflows and reducing manual intervention by 20%.

DevOps Engineer · OptiServe Ltd. Sep 2013 - Apr 2017

- Built and maintained CI/CD pipelines using Jenkins for multiple product teams, supporting continuous integration and delivery.
- Managed Docker containers and helped transition applications to a containerized environment, improving application portability and resource utilization.
- Collaborated with development teams to integrate automated testing into the CI pipeline, reducing defect escape rate by 15%.

EDUCATION

MSc in Computer Science
University of Edinburgh · 2013

BSc (Hons) in Software Engineering
University of Manchester · 2011
